Hasanuzzaman Ovi

Pabna, Bangladesh | ovihasanuzzaman684@gmail.com | linkedin.com/in/hasanuzzaman-ovi | github.com/Ovi-web | x.com/OviHasanuzzaman

Summary

Full-Stack Web Developer and Computer Science undergraduate with 1.5+ years of intensive software engineering experience. Proficient in architecting scalable, reactive web applications using Next.js (App Router), React, TypeScript, and Tailwind CSS, with active exploration in Go (Golang) microservices. Proven capability in state persistence, client-side algorithms, secure user authentication, and responsive UI design.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Go (Golang), HTML5, CSS3, C/C++
Frontend Frameworks: React.js, Next.js (App Router), Tailwind CSS, DaisyUI, Vite
Backend & Systems: Node.js, Express.js, Go (APIs), RESTful APIs, BetterAuth, JWT
Databases & Storage: MongoDB, LocalStorage API, Vector Databases
Developer Tools: Git, GitHub, VS Code, Postman, Netlify CLI, Vercel

Education

Bachelor of Science in Computer Science & Engineering — Pabna, Bangladesh
Undergraduate Student (Completed 139.5 Credits) — *Expected 2026*

- **Core Coursework:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Software Engineering, Computer Networks, Operating Systems.

Featured Projects

(BazarDor) – Commodity Price Tracker | *Next.js, React, Tailwind CSS, BetterAuth* — 2026

- Engineered a real-time commodity pricing and market trend monitor using Next.js App Router and SSR.
- Implemented an algorithmic Bengali numeral-aware sorting engine for accurate currency calculations.
- Built an animated infinite marquee ticker and protected analytics dashboards (‘/product/[slug]‘) via BetterAuth.
- **Links:** Live Demo | GitHub Repo

FitLog – Workout Tracker & Routine Planner | *Next.js, React, Tailwind CSS, LocalStorage* — 2026

- Constructed a dark-themed gym tracking application featuring a curated multi-metric exercise database.
- Implemented a smart 5-lift cap daily planner with real-time dynamic counters for calories, time, and reps.
- Guaranteed seamless client-side state persistence without page reload data loss using custom LocalStorage hooks.
- **Links:** Live Demo | GitHub Repo

Dev Stack – Developer Tooling & Framework Comparator | *React, TypeScript, Tailwind CSS, Vite* — 2026

- Created an interactive stack-building platform enabling engineers to contrast modern frameworks and databases.
- Engineered side-by-side spec comparison views driven by declarative TypeScript data contracts and async fetching.
- Integrated non-blocking interactive toast notifications and responsive layout architectures.
- **Links:** Live Demo | GitHub Repo

Engineering Highlights & Milestones

Continuous Open Source Practice: Built and published modular full-stack projects, adhering to clean architecture, modern React component patterns, and semantic Git versioning.

Scalable System Exploration: Actively building microservice patterns, concurrency handling, and API endpoints using Go (Golang) alongside modern TypeScript web client setups.

UI/UX & Performance Optimization: Designed fluid, accessible, and device-responsive user interfaces leveraging Tailwind utility architectures, achieving high Google Lighthouse performance scores.
